Comments: Sequoia and Sierra National Forests burning and cutting

Choose Alternative C

Please do not allow any "Chainsaw Medicine or "prescribed" burning in our iconic wilderness areas in California. I have camped in many of these areas. They have survived many past man made disasters. They do not need any more misplaced "medicines like chainsaws or fire spreading. Just the scale of the burning that is proposed is a climate disaster in and of itself. The fore industrial complex loves fire. How about just letting any lightening to start any fires and then put them out? We all know how fire smoke is toxic. Why add more smoke. Why ignore our existing laws that govern interfering in our beautiful wilderness areas.

I feel outraged that a few people appointed to high offices in a federal agency would be allowed to propose and support actions that are not in the best interest of our world.

How did these agencies go so wrong?
