Comments: This is our only living planet. With all its amazing beauty and incredible biodiversity, this tiny fragile place in space is ALL WE HAVE, yet we treat it like a garbage can. We dump millions of tons of toxic poisons in our air and water, bulldoze millions of acres of pristine, critically important wildlife habitat, and kill off thousands of species. This has to stop! If or when trump gains control the devastation to our wilderness will be catastrophic. YOU can help save this beautiful, vitally important bit of our country. Please take action to save this important wildlife habitat before it is gone forever. We've already lost 65% of songbirds and 80% of pollinators. Please help!!
