Title:
Comments: I believe that this project should include eliminating the remaining 549 acres of complex mature forests from the harvest plans, should also protect Doug Firs with a diameter of 30 inches or greater, and allow for a no-cut buffer of 1.5 to 2 drip lines on all trees 40" diameter or more to protect their root systems from the negative impacts of heavy machinery.

We need to protect our forests! Please consider. Thank you!
