First name: Jerry

Last name: Reinisch

Organization: USFWS

Title: Fish & Wildlife Biologist

Comments: The USFWS recommends that the entire project area be entered into USFWS-IPAC system for additional analysis. Grassland habitat should be evaluated for Dakota skipper suitability. If present, then occupancy surveys would be warranted. Period of concern for this species would be June 10 to July 25 during which construction activities should be limited. In addition, the period of concern for Northern Long-eared bats would be April 15 to October 31 during which tree removal and other construction should be limited if impacts to this species exist.
