Comments: I support the proposed actions of the Piru Creek WSR CRMP #58710. I encourage the addition of additional trash receptacles within the recreational zone in an effort to minimize dispersed trash along the riparian zone. The addition of a porta potty located at the bridge between Frenchman's Flat and the weir/water gauge is also recommended since the 1/8th mile of creek immediately above the bridge on the east bank has become a defacto bathroom with excessive bowel movement associated waste. I also recommend that a minimum flow during summer months, regardless of the inlet flow from Piro Creek into Pyramid Lake, be established in an effort to provide sufficient oxygenated and cool water to the native rainbow trout.
