Comments: Alternative C is the only option that meets the spirit and intent of the Wilderness Act by allowing natural processes to manage what little remains-and remains protected-of our wilderness.

Cutting and burning based on political pressure and an incorrect reading of the Wilderness Act (not to mention an inadequate understanding of the man-made challenges compromising the natural cycles and health of wilderness areas) have no place in our precious Sequoia and Sierra National Forests.

Let's stop driving the 6th Mass Extinction on Earth and remove all the influences that make forests a higher fire risk.

Our role as stewards allows natural, lightning-caused fire to attend to the needs of our forests in designated and recommended Wilderness in the Sequoia and Sierra National Forests and Moses Mountain. This makes Alternative C the best alternative.
