Comments: I am discussed with the current emphasis on prioritizing wilderness in our the plan. You are putting the wishes of folks that will never visit our forest above the needs of the local community.

Since the last revision of the forest plan, the RV industry has made great strides in outdoor camping equipment, yet there hasn't been a new campground in the forest for years. The ATV industry came about after the current plan, but I see nothing in this about more area to ride or more trails. Our local economy, and the nation as a whole needs forest products, yet we are locking up and planing on decreasing the roads systems so that folks that have never been any where near our forest can feel good about themselves. This whole plan is a sham
