Comments: I'm not at all an expert on fire prevention, but here are some questions that come to my mind (after a review of the proposal!):

- 1) would removing the trees reduce the nutrients that are able to go back into the soil?
- 2) Would snags and fallen trees be removed? (these are super important habitat)
- 3) could prescribed fire be used instead of logging to help prevent mega fires?
- 4) would logging prohibit public access to the land (including tribes using the land for cultural reasons)?
- 5) would this add more forest service roads (which fragment habitat)?
