Comments: I am writing to express my objection to the implementation of the projects proposed by TSVI in the TSVI SUP area as described in Draft Decision Notice 241029 for said projects

I am focusing my objection specifically on the lack of clear language in neither the EA nor the Draft Decision Notice regarding the treatment and disposal of sewage from both the proposed expansion of the Whistle Stop Café and the the proposed Lift 7 Restaurant. If a new septic system is to be built at either or both locations, given the rocky nature of the sites and fragile alpine environment, according to NEPA an Environmental Impact Assessment and EIS are required, yet were not included in the Final Draft Decision.

If septic systems are deemed not viable and the sewage is to be transported to the existing sewage treatment facility, no determination has been made as to whether that facility can handle the increase in waste volume.

I request that a full EIA be conducted to determine the feasibility of sewage treatment for these projects, with an EIS including an alternative of No Action.

In addition to this, I also request that a full EIA be conducted and subsequent EIS including an alternative of No Action be made for the Gondola Project, as given it's scope, an EA would be insufficient according to NEPA.

Thank you for reading my objection and taking the necessary actions delineated therein.
