Title:

Comments: I dont like that under your plan. That volunteer trails are viewed as more impactful than logging operations. It disrespects individual citizens and lets for profit operators clearly ignore all those effects.. because of profits..?

It is also interesting that the science says that increased soil depths are directly proportional to forest health yet no efforts to increase soil depth are presented yet you claim your plans will increase health and resilience from mechanical treatment and monocultures which cause compaction or continuous fuels resulting in enhanced fire impacts.. when the "fuel" contacts the earth it turns to soul. Arrange the fuels into soils please save it for future generations! Citizens get access cut and roads obliterated, right of way's abandoned but any commercial operation can do whatever, none of them treats their weeds.
