Comments: Restoration efforts after a very tough year, totally understand and support. As I have traveled around the Boise National Forest for 40 years it's sad to see in any direction black Burnt landscape. From any lookout or peak in the BNF the view has huge fire damage. It just wasn't this year. speaking on Deterring the creation of unauthorized Motorized Routes. in watching what goes on during fire's

There are dozers, fire trucks, countless chain saw crews doing unbelievable great work during a fire I watched it firsthand on the flat fire. Limiting (Deterring) Motorized use seems to always come up in a restoration topic. motorized was happening prior to the fire and motorized was used during the fire and motorized seems to be a large component to do the restoration.

soil erosion comes in all angles, fire burnt drainages slide right before winter during the rains and during snow melt season, they are all over the fire burnt areas in huge amounts.

restoration is very important to the well-being of the public and the health of the forest infrastructure. Motorized is also vital to the Boise National Forest.
