Title:

Comments: I object to this project. It does not meet the needs of the OHV users, it takes away sections that we seek that offer a challenge. It proposes moving the solid road into a wet meadow in one spot. It proposes bulldozing roads where new roads are not needed. The proposal is not accurate and not put together well. People proposing and working on this project have not even visited all the sites in this project. Most OHV users and most Public comments are against this project. 55.80% of the public does not want the project to move forward. Its a much higher percentage if you just count the OHV users, so much for "OHV Enhancement".

A lot of money was wasted on scoping this project. Moving forward there are no funds to complete this project. Maintenance objectives are not currently being met. This whole project is a hemorrhage of tax payer money and a perfect example of egregious waste.

Simple solutions exist.
