Comments: Hello Everyone; I have lived at Lake Almanor my entire life, 73 years. The forest has become more unhealthy since the USFS has restricted logging and other treatments to our public lands. Since the Dixie fire, in 2021, brush is taking over the landscape. All treatments need to be utilized in order to bring back a sustainable forest, which will take hundreds of years. It is of the importance to create and maintain fuel breaks and wild land urban interface. Maintaining these areas has to be done every 3 to 5 years, whether it's included in the North Fork Recovery Plan or in future plans. Thank You
