Title:

Comments: I fully support this project. Many of the stands in this area have needed treatment for years and are in a condition that would support extreme fire behavior immediately adjacent to private property. Treating these stand and moving them towards the desired condition found in the Kootenai National Forest Plan will protect private property from fire, create a forest that is more resilient to fire and provide more variety in vegetation species, age and spacing. The desired condition will provide varied and beneficial habitat for wildlife and improve opportunities for everyone wanting to enjoy and recreate in our national forests.
