Title:

Comments: This is in reference to the chosen option C. I own property that borders an area that will be burned as well as individual tree harvest selection. I have submitted objections during each previous phase of this project and feel that option C represents progress. I still object to the burning due to the risk that it will burn into property that I own. Based on GPS location, the blazed boundary which was updated by the forest service since my last objection does not match the actual property line between my property and the forest service land, as it is blazed well inside the GPS boundary. I have not been able to find a new surveyor who can reconcile the deed with the GPS or Blazed boundaries after the previous surveyor stopped for health reasons. I request that any trees that are selected for individual harvest be selected using the GPS boundary rather than the blazing. And similarly request that all fire be kept within the GPS boundary rather than setting the forest ablaze to the blazing.

Also thank you for greatly diminishing the area in which you plan to use chemical treatments.

thank you,

Vaughn Micciche
