Comments: As a property owner on Sheldon Flat's I appreciate being notified of the Pine Phlats Project. Thank you to both Lisa Osborn and Nathan Gassmann for sharing information and answering questions.

I support the project and appreciate the need for fuel reduction.

Unit 301 as a commercial timber harvest of clearcut with leave trees sounds very ugly! Anything you can do achieve your objects and improve the visual appeal? Such as leave lots of trees. Could it be masticated rather than piled and burned?

Yearly I work to keep the invasive weeds to a minimum on my project adjacent to the Pine Phlats Project. I am very concerned about noxious weed control. With the limited staff and resources what can the FS for weed control? Could the project use more wood chipping to help control weeds?

Thank you

Pat McLeod
