Comments: I am writing to express my opposition to the Telephone Gap Integrated Resource Project in the Green Mountain National Forest. This section of forest contains some of the oldest growth trees that are left in Vermont, which are sequestering a significant amount of carbon that is helping to balance the effects of climate change. As I understand it, there is plenty of private land within the Telephone Gap portion of the Green Mountain National Forest that is actively managed/logged, and I do not support the plans to increase logging in this area, particularly because it includes old growth portions of the forest.

Thank you for taking my viewpoint into account, as I hope you will do with all of the others who are speaking out against this project.
