Comments: To whom it my concern

I writing express that I am opposed to the above ground transmission project. The project brings environmental risk to the surrounding area. The desert environment, droughts, and frequent high winds pose a fire risk that could be devastating. We have already seen this in California and don't need to repeat it here.

From an esthetic view, building this here is to put it bluntly will be a significant eye sore. Anyone can see that the surrounding beauty of the red rocks would be impacted by this man made atrocity.

As a member of the community I am against this proposal.
