Comments: I totally oppose drilling in the Conecuh National Forest. Our forest is a home to many species including gopher tortoise, white tailed kite and black indigo snakes not to mention the deer and turkey. These species are important to the lands and future of our forest. Their habits must be safe from destruction. We also have beautiful lakes and ponds. All of this will be destroyed if we allow drilling to happen. The natural ecosystem that the Conecuh National Forest has will also be destroyed if we do nothing and allow the drilling to commence. Trees and vegetation will be destroyed and this will cause erosion and flooding in places. Please say no and save this beautiful forest so that others can see and enjoy it in the future.
