Comments: As a long-time property owner in the Fernberg Corridor I understand the need for this extensive project, especially reducing risk of woodland fires. I support Alternative 2 with the understanding that prescribed fires within the BWCAW would happen after fuel reduction efforts outside the wilderness are mainly completed . This would increase safety and access of residents, tourists and USFA staff. Also I understand that the prescribe burns within the BWCAW would be done over a period of 20 years based on conditions and to minimize adverse impact for wilderness users.

I thank the USFA and your partners for all the work invested in this project! I hope that federal funding will be available to support this needed effort.
