Comments: The Flathead Wild & Scenic River System runs thru gorges & valleys & is one of the most celebrated Wilderness Areas in MT. The FS is proposing new regulations, some of which are good & to be commended. But more steps need to be taken toward limiting impacts & gathering data. Research is needed about the impact's recreation is already having on the wilderness & its wildlife. The FS needs more scientific data. Habitat protection on the Flathead River is most important & cannot wait any length of time. Immediate action is needed to address wildlife displacement when too many people & projects are in the area. Wildlife & their environment should be the first & foremost concern. When wilderness is trampled & left unprotected, it will be destroyed. When it's gone, it is gone forever. Thank you.
