Last name: Strijek

Organization:

Title:

Comments: Below are important points/concerns I have regarding the management plan.

- * I support mandatory float permits to improve visitor use data without restricting access.
- * Require waste packout and firepan requirements to protect water quality and the environment but don't require a certain size as packrafters have limited space.
- * Monitor visitor experience to better track congestion and river conditions.
- * Need transparency on how user capacities are determined and how private user input is considered.
- * Outfitters should be held to different standards than private parties since they are more likely to include larger groups.
