Comments: I work in conservation including sustainable resource management and recreation lands upkeep.

This management plan is not adequate to protect the ecology and wildness of the Flathead river system, I believe, for several reasons. First, the plan fails to adhere to wilderness standards of recreational traffic, what the Bob Marshall deserves. Second, the plan fails to meet ecological standards needed for this wild and scenic river through the monitoring of bio markers such as soil quality, habitat and animal population. Please reconsider and take the time to reel this in. Restrict usage. We only have one chance at protecting our river ways from pollution and abuse.
