Comments: I strongly OPPOSE the above ground transmission lines in the VOC. It's a increased fire risk that is not warranted. And our fire risk is already heightened due to extended extreme drought and increased temperatures. My fire insurance has already increased by 150% due to this! I don't need to increase my fire risk further or I may face cancellation or inability to secure coverage at all!

It's been 553 days since my last outage per YOUR records. So why do we need increased power lines? It's also unsightly, negating the scenic byway of 179.

If you must put in new transmission lines , then BURY ALL of them. You'll pass on the cost to me regardless if buried or above ground, so I want buried lines!
