Comments: I favor a modified version of Alternative C that protects mature forests and provides adequate buffers around Marbled Murrelet nests.

I am concerned about all of the alternatives in their current form will lead to increased logging of mature forests. We need MORE old-growth forests, not less.

Ultimately the protection of endangered species like Marbled Murrelet and Spotted Owl is not only about preserving those species. The habitats they need to survive are what all of us need to mitigate the rapid and worsening impacts of global warming.
