Comments: E-Bike Use on select Jackson Area Trails

An e-bike is a motorized vehicle. The term "pedal assist" means that the motor is energized when you start to pedal, rather than using a handlebar throttle control. There should be no misconception about this.

Riding an e-bike requires a high level of fitness and experience to be done safely. Riding out to Mount Elly, up Mail Cabin Creek or even riding up the Old Pass Road on an e-bike would require that fitness, skill, and experience. The safety of other nonmotorized users would be compromised, to say nothing of their enjoyment. The trails themselves would be exposed to more erosion. Please keep e-bikes off Teton Pass.

I think more pressing and important issues on Teton Pass include a shortage of parking and a lack of sanitation facilities, especially for handicapped people. Lack of sanitation affects everyone and adversely affects the watershed. Please consider these topics.
