Comments: To All Concerned,

I recommend and for you to implement the end of logging of mature and old-growth forests which threaten the health and safety of communities across our country.

I recommend and for you to implement incorporation of Traditional Ecological Knowledge, Tribal Involvement, and Environmental Justice concerns.

I recommend and for you to implement inclusion of tribes and environmental justice in forest management, while at the same time preserving and advancing ecological protections in our national forests.

And lastly, I recommend and for you to implement strong protections for water quality, species habitat and the carbon storage values they provide.

Thank you for your time and consideration.

Respectfully
