Last name: Dragovich

Organization:

Title:

Comments: I am in favor of the tribal engagement portions of the Plan and the beneficial burn provisions. Being familiar with the real costs of climate change I believe your cost-benefit analysis of community benefits is deeply flawed. I doubt you will go back and redo that. At minimum, the Plan should be amended to define old growth in both the low moisture and moisture scenarios to be 80+ years, that is, no cutting of timber older than 80 years. We must preserve our little remaining old growth, Protect What's Left.
