Comments: I love the Pacific Northwest. I love its greenness I love its trees I love its recreational opportunities. I do not believe that logging older trees and more of them is going to help with the increasing fire danger in the NW. The older larger trees are more fire resistant and they are deeper in the forest. I do not believe we need more roads deeper into our forests. It seems like the forest service subsidizes the logging industry to me. I believe that The proposed changes in The Forest plan would degrade water quality and fragment ecosystems. I do not believe everything should be monetized. we should slow down on our monetizing everything so Future generations can enjoy nature In its natural setting.

thank you.
