Comments: It is very important to me to protect mature and old-growth forests of all kinds including the forestes of the Pacific Northwest. All aspects of the forest need protection including, but not limited to, Trees, wildlife species and habitats, soil and the landscape, and the water cycle services the forest provides. If forest fires are the concern, there are numerous ways to lessen the severity and human imact of forest fires. The reintroduction of beavers is one of the many ways. Please read "Eager: The Surprising, Secret Life of Beavers and Why They Matter" by Ben Goldfarb. And PLEASE protect the forests of the Pacific Northwest and all mature and old growth forests of North America.
