Comments: I am for more logging of timber in the Mt Baker Snoqualmie National Forest. This will open up the forest to the ungulate population. A WDFW study showed that the forest currently does not have enough forage to support the population which has decreased significantly as a result. Also a younger forest is more conducive to CO2 emission removal than a mature/old growth forest. So please remove some of the current constraints that slow down timber sales and their barriers. Thank you Keith Peter
