Title:

Comments: People seem to believe that unchecked taking of natural resources is right--it serves people. It certainly serves some people at the expense of wildlife and the environment. Many species have already gone extinct. Unchecked logging can lead to a desolate world not fit for anyone. We are already suffering from a carbon filled atmosphere and global warming. It certainly serves certain interests to negate science. What sort of legacy is this for future generations? This kind of selfishness will lead to a "Mad Max" world of hot concrete. Please care about this planet, wildlife, and forests. Approve a final Plan that prioritizes wildlife, climate, and ancient forests...not logging at all costs.
