Comments: Please consider the science and meticulous and thorough research that proves old growth forests , ancient wilderness is essential and at this critical time has to be protected.

All we are asking for is common sense leadership when decisions about the big old trees are made.

Legacy forests, what is left of them here in the West are not replaceable and once gone they cannot be replicated. Have the courage to voice opposition to loosening regulation on best practices.

Do not frame changes with buzz words like thinning and fire suppression be transparent and know that we are watching and will never quit in fight .

Consider future generations in any decisions that are made and just open your heart and ask yourself would my grandchildren be proud of my choice in this moment.

Thank you for your service
