Comments: My comments address the Complete Protection of the Siuslaw National Forest, the largest remaining remnant of Pacific Coastal Temperate Rainforest in the lower 48 states, for present and future generations of all life forms that depend on it for existence. The natural stands (approximately 60% of the Forest) are Fire Resistant but are presently classified as Moderate on Oregon Wildfire Risk Maps. The only place Wildfire CAN BURN SIGNIFICANTLY is in areas that have been HARVESTED. Present management and the Preferred Alternative are a VERY DANGEROUS PLAN for the complete destruction of this IRREPLACEABLE ECOSYSTEM that will ONLY BENEFIT the ENDANGERED , THREATENED and other species (including humans) by STOPPING ALL COMMERCIAL HARVEST of the Forest that continues to SEQUESTER MORE CARBON EVERY DAY YEAR AFTER YEAR than any Forest anywhere!

I am in total agreement with Comments submitted by the Coast Range Association with a very detailed analysis of each point of the Proposed Amendment and the steps necessary to PROPERLY MANAGE THIS NATIONAL PUBLIC RESOURCE FOR PRESENT AND FUTURE GENERATIONS!

I will finish by saying the present Administration has declared and begun the process to complete the LIQUIDATION of the LAST 10% of Natural Forest in The Pacific Northwest that was temporarily spared by implementation of the Northwest Forest Plan. That would make billions of dollars for those that have trillions already, end the existence of the species dependent on the Habitat, diminish water quality and quantity and doom humans to a future on a planet in meltdown! So that we can build more housing to BURN in the increasing urban conflagrations? Most lumber in the US is imported, a majority from Canada. The mask is off and the people are waking up to the lies and deceit perpetrated by Corporate Capitalists for the benefit of the SUPER RICH over the past two centuries. Please do the right thing and PROTECT THIS AND ALL NATIONAL FORESTS FOR FUTURE GENERATIONS AND LIFE ON EARTH!
