Comments: Northwest Forest Plan Amendment #64745

I am advisor to my high school's Forestry Club and I teach AP Environmental Science. As long as we use paper and wood products I recognize the need for logging. I also recognize the need for careful forest management and sustainable harvest. Climate change, water quality and biodiversity need to be considered in any plan. Old growth forest are so restricted that none should ever be logged. Ever. For that reason I urge the Forest Service to reject this plan that would imperil the future of our forests.
