Comments: I am writing to urge the passage of a Forest Plan that strongly protects our remaining old growth & mature forests from increased logging levels, particularly as our forests are under assault from federal Executive Order calling for expansion on timber production. An expansion of the logging threshold from 80 year stands to 120 year stands as included in Alternative B & D puts endangered species that depend on old growth forest at risk, jeopardizes our clean water, and hampers any progress on climate change by damaging carbon sequestration by mature forests.

Our old growth forests are a precious resource, once destroyed we can never get that unique landscape back. Please protect them! Thank you.
