Comments: I would like the forest plan to focus on fire management through working on the ecosystem so the forests can withstand wildfires. Wildfires are a natural part of the cycle but when there is so much vegetation and fuel below the fires burn too hot and kill everything. I appreciate being able to hike or camp in the forests. Now it seems like as soon as the snow melts the fires start. The smoke has been a real issue for hiking and camping and continues to get worse each year.
