Title:

Comments: My family and I are residents of central Oregon. We recreate in and treasure our state's unique and invaluable forest lands. We would like to lend our support for Alternative C. We believe that Alternative C gives the best chance of protection to our forest ecosystem to combat climate change and increased incidence of natural disasters. I would strongly encourage the USFS when logging to maintain our canopies at 75% coverage. This will increase water storage, minimize evaporation, provide cooler surface air temperatures, increase plant biodiversity, habitat for our wildlife and buffer our forest against fires.

Our second choice would be Alternative A, leaving current requirements in place.
