Comments: In reviewing the DEIS, I agree with the conclusions of the Coastal Range Association that there needs to be a greater focus on:

- 1) Recognizing the distinction between the wet and rainforest sections of the Siuslaw National Forest versus other portions of the SNF.
- 2) The huge role that the SNF plays in being a carbon sink
- 3) The natural fire resistance of the wet sections of the SNF
- 4) Reserve discussions of fire resilience for human habitation
- 5) The impact of climate change on the forest
- 6) Prohibit commercial timber harvests in designated LSR areas.
- 7) Commercial forest thinning should be replaced by Forest Service budget funded thinning.
