First name: Helen Fisher

Last name: Fisher

Organization:

Title:

Comments: Our natural environment will be the only salvation for our children in the future! The forests and old-growth trees help disperse and absorb the heavy rains to prevent disastrous landslides that kill everything in their path! They hold the healthy soil and plants to nurture more than just the wildlife that they protect. They also help filter our water! Well maintained forests prevent erosion and the risk of fire. We have had to deal with too much of both of those catastrophes that cost all of us more than we can handle. Most rational people would prefer to use our taxes to support our natural areas and preserve our health and future.

MAHA is all about making America Healthy Again but nothing will work to make that happen more than places that protect our air, water, and peace of mind!

We ALL MUST realize everything that's at stake otherwise. Drill baby drill IS NOT SUSTAINABLE for a healthy country!

Thank you for your leadership, courage and commitment to the preservation of your children's environment and a healthy future for all of us.

This link will hopefully be a useful reference. Our natural environment is literally a living thing that incorporates ALL of LIFE.
