Comments: I believe it is vital for our long term prosperity in the NW that we maintain the current NW Forest plan 80 year threshold. Please do not accept any alternative that increases logging so dramatically.

Please prioritize Natural Climate Solutions including longer forest rotations, leaving mature and old-growth trees on the landscape. We need to sequester carbon as much as possible, not contribute to further global warming. Our wild spaces are a vital resource and must be protected from short term economic gain.

Thank you!
