Title:

Comments: I would like the Forest Service to incorporate and celebrate the world class growth and accumulation of forest biomass. I support DEIS-Option B's approach of not using fuel load reduction - a totally unwarranted strategy for moist, wet and rainforest zones. I believe that Fire resistance, not resilience, must be the goal. I believe that wet and rainforest temperate ecosystem integrity is not supported by commercial timber removal and extensive road networks. I think that the DEIS must base forest thinning on wildfire resistance and the retention and build-up of sequestered carbon for wet and rainforest life zones. I am very pleased that the Forest Service keeps Late Successional Reserves.
