Comments:

Forests are vital for fighting climate change, filtering clean water and keeping wildlife safe.

> Maintain protection for stands 80 to 120 years old.

> Wildfire resilience is not enhanced by logging mature trees far from communities.

> Protections for endangered species must not be weakened.

> Tribal input should not be tied to doubling the logging quota.

> Carbon sequestration is better achieved with mature forests rather than fire-prone plantations.

Thanks for doing the right thing to protect all life on our planet!
