Title:

Comments: I'm not originally from Oregon, but when I was younger, my mother took a trip to Oregon and saw all the beautiful Trees and Forests, and that's what made her move here to built a life and family here. If the Trees are not protected, then my home is not protected.

I am fascinated by nature and bugs and plants and all things that grow in Forests. I have a little brother that loves to go outside and play in the dirt and water and touch the Trees. We even have a game we play with all the tall Trees around our home. When he grows up more, I want to teach him about the science behind nature. If the Trees are not protected, then my brother is not protected.

I know how important Trees are to human life. Trees clear away the carbon dioxide we breath out and the carbon dioxide released by our technology involving fossil fuels. I understand that if Forests and Trees die, then Earth will have significantly less oxygen. If the Trees are not protected, then humanity is not protected.
