Title:

Comments: Please do not increase logging in mature and old growth forests. This will put our forests at further risk from fires as intact forests reduce wildfire risk. The impact of logging these mature forests goes beyond the trees and impacts the water, wildlife, and recreation opportunities of these areas. Once these forests are gone, they cannot be restored. We should prioritize the long term more widely distributed economic benefits of these intact forests over short term timber profits. Tribal stewardship should be supported and not tied to increased production. Please consider the long term benefits of keeping these forests in tact - economic, environmental and social - and do not make amend this forest plan.
