Comments: Hi,

The proposed changes would vastly increase logging in mature and old-growth forests putting wildlife, clean water and climate at risk. Please protect mature and old growth forests and do NOT raise the logging limits to 120-150yrs old. Please work to save wildlife like the Northern Spotted Owl and Marbled Murrelet. Intact forests reduce wildfire risk and fight climate change, cutting them down does the opposite. I support Tribal stewardship but it should not be tied to increases in logging. We should value recreation, clean water, and fish habitat over timber profits!

Thanks

Beau Richardson
