Comments: I support the Coast Range Association's comments on the DEIS.

We must maintain canopy in these forests. Using fuel load reduction is incorrect management in coastal rainforest. I support the DEIS position to not use fuel load reduction in coastal rainforest.

The planet is getting hotter and changing faster than the models predict. Preserving trees not only helps sequester carbon but also creates SHADE to keep the sun from directly heating the earth's surface. I have lived it. It's just facts.
