Comments:

I am a resident on the coast of Oregon where I live with my family. We live on the Yachats River. We would like to lend our support for Alternative C. It is my belief that Alternative C gives the best chance of protection to our forest ecosystem given all that stands in the way with climate change. I would strongly encourage the USFS when logging to maintain our canopies at 75% coverage. This will increase water storage, minimize evaporation, provide cooler surface air temperatures, increase habitat for our wildlife and buffer our forest against fires.

Our second choice would be Alternative A, leaving current requirements in place."
