Comments: Dear Forest Service -

The following are my comments:

Maintain protection for stands 80 to 120 years old.

> Wildfire resilience is not enhanced by logging mature trees far from communities.

Log younger trees close to communities

> Protections for endangered species must not be weakened.

> Tribal input must not be tied to doubling the logging quota.

Provide grants for homeowners to remove trees on private property

> Carbon sequestration is better achieved with mature forests rather than fire-prone plantations.
