Comments: Hello,

I am wanting to comment on the concern I have about increased logging in mature and old-growth forests putting wildlife, clean water, and climate at risk!

Please don't raise logging limits over 120 years. Intead, save wildlife like the Northern Spotted Owl and Marbled Murrelet. Intact forests flight climate change and reduce wildfire risk. Valuing recreation, clean water, and fish habitat over timber profits is so important.

Thank you for considering and for listening to what the population wants and needs in order to establish what is best for the people and the country in the long-term instead of focusing on profits now.

Best,

Rachel
